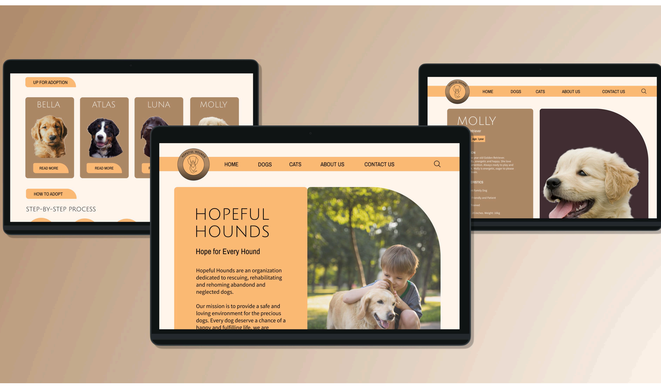
Hopeful Hounds



UI Design; High-Fidelity functional Prototype website.

Course Assignment
Noroff

1 week

Tools used

Overview

Expanded a previous dog adoption page into a fully functional website prototype for an animal rescue organization. Designed a homepage, dog category page, and contact page with interactive elements for a realistic user experience At last designed and coded the favicon.

Project Timeline and Structure

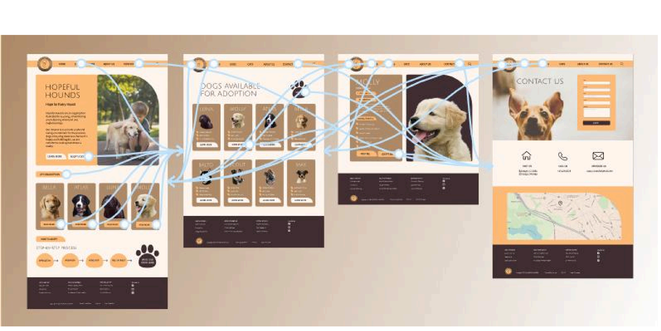
- Day 1
  - Sketch out the layout for the "homepage", "dog category page" and "conact us" page
- Day 2
  - Create high-fidelity prototype of each page: Homepage, Dog category page and Contact page.
- Day 3-4
  - Link up pages, create transitions. Include interactivity in at least three placers.
- Day 5
  - Design and code the favicon.

High-Fidelity Design

After doing sketches for all the pages reqired in the assignment I designed a complete, high-fidelity prototype (Homepage, Dog Category, Contact) using Figma as my design tool. I incorporating branding: such as a logo, colourpalette, chose fonts and images relevant to my design. Included interactive elements for a realistic user experience.

Interactive Prototype

Implemented clear page linking and transitions, enabling users to navigate from the homepage to contact and dog category pages, and to individual dog pages. Added interactive elements like hover effects and image animations for enhanced engagement.



Conclusion

This project demonstrated my ability to create a cohesive and interactive website prototype from initial designs. By focusing on clear user flows and engaging interactions, I delivered a realistic and user-friendly experience, showcasing my skills in high-fidelity prototyping and UI design
